

Four mechanisms are separate models, not four settings of one model

| Track | Mechanism               | Published surrogate | Highest state     | Gate result                   | Status             |
|-------|-------------------------|---------------------|-------------------|-------------------------------|--------------------|
| A     | Reynolds-JFO            | SAE 10W-40          | 4000 rpm          | converged + cross-code parity | ACCEPTED NUMERICAL |
| B     | oil vapour              | SAE 10W-40          | 28 rpm hold       | phase field still drifting    | UNSETTLED          |
| C     | non-condensable gas     | ISO VG32            | 0 rpm, step 40    | 2.04% mass imbalance          | UNSETTLED          |
| D     | atmospheric ventilation | VG22                | 3500 rpm, 4.37 us | p_abs fell below zero         | REJECTED           |
